

Troldtekt®

Natural acoustic solutions

FAST FACTS

- Troldtekt is a cement-bonded wood wool panel made using nature's own materials – wood and cement
- It is available in four different structures; Extreme Fine (0.5mm), Ultra Fine (1mm) Fine (1.5mm) and Coarse (3mm)
- Troldtekt is available in four different sized panels: 600 x 600 x 20mm, 1200 x 600 x 25mm, 2000 x 600 x 35mm & 2400 x 600 x 50mm
- It is perfect for both ceiling and wall applications in Residential and Commercial spaces
- Troldtekt is a high acoustic product, with the ability to achieve an NRC of 1, it is the perfect way to bring noise reduction into a home in a modern way
- The panels are allergy friendly and have achieved leading Danish and International Climate Certifications as the product is breathable with the ability to absorb and release moisture
- The Troldtekt panels have a natural strength with a lifetime of 75 years. Their durability and strength mean that even when a ball hits the product at 81km/h it does not break making it suitable for schools and gyms
- The product offers flexible design solutions, with the ability to paint yourself whatever colour you like (without affecting acoustic properties), be suspended in different formats such as cloud or on walls, and has the ability to seamlessly incorporate all services into the ceiling
- Installation is easy and time effective, either direct fix to the wall or ceiling with Troldtekt invisible screws, or drop into a standard ceiling grid system
